Matias Korpisalo

Senior Product Manager

6+ years scaling B2B SaaS, fintech, and insurance products from 0→1 to growth. I own product end-to-end — discovery, roadmap, analytics, and GTM. I've launched products from scratch, managed enterprise clients at scale, and built the PM function at a Series A company. On the side I build my own tools to understand where AI-assisted products actually break down.

Product Manager

Aibidia, march 2025 - Present

Senior-scope role. First PM hired into the organisation, later built out the PM function with two additional hires.

Key Achievements:

- Took the product from ~20% functionality to a fully closed loop — users can now input data, analyse it, see what's wrong, and push corrections back to source systems
- Platform usage grew 300% over the year through new features, improved onboarding, and fixing issues surfaced by proper analytics
- Replaced broken analytics stack with PostHog — ran the full tool assessment, implemented in two weeks, immediately started finding real product issues that had been invisible before
- Led cross-functional team of 8 (engineering, design, QA) with engineering manager — defined goals, priorities, epics, acceptance criteria, and release cadence
- Built PM operating system from scratch with two other PMs: discovery framework, insight routing from sales and CS, structured prioritisation, and a public-facing release process
- Shipped internal AI workflows to accelerate discovery, documentation, and experimentation
- Presented product strategy and investment cases to executive team
- Enterprise clients include Unilever and Nokia

Founding product Manager

Alicent, Feb 2024 - march 2025

Founding team member. No product, no customers, no playbook on day one.

Key Achievements:

- Ran 30–40 customer interviews to define the core problem — companies bidding for public procurement contracts were spending hours manually searching for opportunities that matched their capabilities
- Built an AI-powered platform that crawls public procurement databases, cross-references company capabilities, and surfaces best-fit opportunities automatically
- Designed end-to-end workflows and UI in Figma with our frontend developer
- Acquired roughly 10 of the first 30 customers personally through cold outreach via LinkedIn and Apollo
- Built all sales materials, ran demos and sales calls, handled customer onboarding
- Funding round didn't close. Company restructured and continues to operate today

Senior Product Manager

Nordea, March 2022- feb 2024

Led design, development, and launch of new financial products with measurable user adoption and engagement growth.

Key Achievements:

- Built and launched BNPL product from zero, exceeding adoption and revenue targets by 20% in the first 6 months
- Owned roadmap across 3 consumer finance products simultaneously — BNPL, credit cards, and a €10M ARR credit portfolio
- Introduced A/B testing and internal performance analytics — reduced API errors, improved response times, faster and more reliable product
- Built product metrics framework that gave leadership faster visibility into performance across all product lines
- Developed business cases for new initiatives, securing executive support for product expansion across the Nordics
- Led cross-functional teams across engineering, design, and commercial — coordinated across markets and regulatory environments
- Mentored 2 junior PMs on product strategy and how to move faster without cutting corners

Product Manager

If, May 2019- Jan 2022

First PM role. Owned the digital insurance purchase flow and post-signup customer experience across Nordic markets.

- Increased customer signups 20% — identified that invalid email addresses were silently killing conversions, fixed the validation logic, immediately saw the impact
- Increased marketing consent acceptance rate 30% through flow improvements and UX optimisation
- Grew online sales 10% through systematic A/B testing — learned experimentation from scratch in this role and built it into how the team worked
- Led a small cross-functional team of 2 data analysts and a business developer
- Worked across all Nordic markets within a major regulated insurance environment

PERSONAL PROJECTS

Noted — Consumer Notes App

noted-smoky.vercel.app

Built a consumer-facing notes app on my own, AI assisted

- Designed product concept, UX, and interface.
- Built prototype using modern web tools and AI assistance.
- Conducting user testing to understand engagement and retention patterns.
